

Patient Name: Danladi Ibrahim Garba

Hospital No: GCSH/2026/1092

Age / Sex: 62 Yrs / Male

Address: Plot 14, Ahmadu Bello Way, GRA, Kaduna State

First Visit / Adm: 01/09/2026

Discharge Date: 15/09/2026

DIAGNOSIS

PARAGRAPH 1 FOR FINAL DIAGNOSIS & STAGING: The above-named patient was admitted to our facility under our medical team care. Upon detailed clinical evaluation and diagnostic workup, several key clinical features were noted. Comprehensive baseline investigations were conducted including complete blood count, kidney function tests, liver enzyme profiling, abdominal ultrasonography, and chest radiography.

PARAGRAPH 2 FOR FINAL DIAGNOSIS & STAGING: During the hospital stay, patient received intensive supportive care, intravenous antimicrobial therapy, tight glycemic control, and serial monitoring of vital signs. The patient responded favorably to treatment, showing progressive resolution of symptoms and stabilization of biochemical parameters.

PARAGRAPH 3 FOR FINAL DIAGNOSIS & STAGING: Outpatient follow-up plans were formulated with clear instructions on lifestyle modification, medication adherence, and warning signs requiring immediate emergency review. Periodic laboratory reassessment is recommended in 4 weeks time.
